8. Statement of Significance

Applicable National Register Criteria

- A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B** Property is associated with the lives of persons significant in our past.
- C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D** Property has yielded, or is likely to yield information important in prehistory or history.

Areas of Significance

Architecture

Period of Significance

1951

Significant Dates

1957

Criteria Considerations:

Property is:

- A** owned by a religious institution or used for religious purposes.
- B** removed from its original location.
- C** a birthplace or a grave.
- D** a cemetery.
- E** a reconstructed building, object, or structure.
- F** a commemorative property.
- G** less than 50 years of age or achieved significance within the past 50 years.

Paperwork Reduction Act Statement: This information is being collected for applications to the National Register of Historic Places to nominate properties for listing or determine eligibility for listing, to list properties, and to amend existing listings. Response to this request is required to obtain a benefit in accordance with the National Historic Preservation Act, as amended (16 U.S.C. 470 et seq.).

Estimated Burden Statement: Public reporting burden for this form is estimated to average 18.1 hours per response including the time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding this burden estimate or any aspect of this form to the Chief, Administrative Services Division, National Park Service, P.O. Box 37127, Washington, DC 20013-7127; and the Office of Management and Budget, Paperwork Reductions Projects (1024-0018), Washington, DC 20503.

Section: 7 Page: 5 Wiener House at 228 Ridge Drive
Hinds County, Mississippi

NARRATIVE DESCRIPTION

The Wiener House at 228 Ridge Drive is in the Woodland Hills subdivision in Jackson, Mississippi. Woodland Hills is a well-established residential subdivision with curvilinear streets and mature landscaping. The house was designed by Samuel G. and William B. Wiener in 1950 for their cousin, Dr. William B. Wiener and his family. The home sits on a half acre with many large trees including two mature live oaks, four other oaks, and an enormous tulip tree.

The house's design employs elements of the International Style including planar surfaces, rectangular forms, ribbon windows, and some industrial materials all of which are unconventional for a private residence in this area. The principal International Style components of the house are the same as when the Wieners first moved into the home in 1951. The house was originally designed in the shape of a "T" with a public wing, private wing, and service wing. An addition designed by William B. Wiener added private space and an additional wing in 1957.

From the street the Wiener House contrasts with more traditional southern homes in Woodland Hills with its flat roof and unadorned, rectangular walls (photo 0006). Steel poles of industrial pipe typical of the International Style are also prominent features as is a large ginkgo tree, planted in a semi-enclosed courtyard, which seems to rise from the roof. The entrance to the house faces west and not south toward the street which confuses some first time visitors to the home (photo 0011). To the west of the entrance is a two-car carport that was placed prominently in the design in order to feature the importance of the automobile to the modern American family. Three retaining walls built with light brick block the views to the side of the carport, courtyard, and patio and give privacy to the house and yards. The main front wall of the house is the same light brick and is covered in a pyrocanthis that has grown to resemble a conceptual drawing made by the architects in 1950 (photo 0012 & Figure 1). Adjacent to the carport is a small courtyard with a single ginkgo tree that projects through a square opening in the roof. This courtyard provides a tranquil view from the kitchen obstructing the view of much of the traffic on Ridge Drive. Many modern architects, including Frank Lloyd Wright, included ginkgo trees in their designs and this one has grown to a size the architects originally envisioned.

The entrance to the house faces the carport and is accessed from a covered, rectangular patio (photo 0007). A window placed high on the wall is glazed at the corner without interruption of a structural support at the corner. An interior industrial pipe, like the ones in the nearby carport, provides some support (photo 0005). Looking through the house to the north, the visitor sees a view down the hall and out the master bedroom window. Once past the closet, a large living room and dining area are accessed with a wonderful view of the patio (photo 0019). The south wall is clad with the light colored brick seen on the exterior, the east wall is made of large panes of glass, and the north and west walls are covered in a ribbon mahogany paneling. In the dining area a small cabinet suspended between two walls with a floor to ceiling glass wall fills a niche area adding natural light to the room from the west side.

National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

Section: 7 Page: 6 Wiener House at 228 Ridge Drive
Hinds County, Mississippi

One of the greatest features of the house is the original terrazzo floor which is in perfect condition. In this room and much of the house it is a black and white marble pattern which provides great continuity. According to the original specifications for the terrazzo the total thickness of under bed and terrazzo is 2-3/4" thick and composed of Portland cement and marble chips which all passed a 3/4" mesh sieve. The division strips that divide the terrazzo into 3' square sections are 1-3/8" x 1/8" white metal strips set on edge.

A partition wall separates the living/dining room from a den that was originally designed as a game room, but was never used as such. The den has a wall of built-in bookshelves and cabinets probably inspired by a Herman Miller design which originally housed a stereo system (photo 0004). The bookshelves, walls and doors to a closet and hall are covered in ribbon mahogany which emphasizes the planar design. There is no trim around the doors to distract from the design. Two large wooden doors give access to the patio from this room. A small addition to the cabinet was designed by the original architects in 1951 to cover a patch in the floor. These rooms look almost exactly as they did when they were originally built except that the ceilings are no longer green.

The kitchen forms the lower part of the T design and projects from the den/dining partition area. It was originally considered the service wing of the house and includes a breakfast area, galley style kitchen, and laundry room. The breakfast room has upper and lower cabinets and a long counter top for serving. One side of the kitchen has upper and lower cabinets with a small window designed for Ms. Wiener to check on the children playing in the driveway. The original stainless steel sink and countertop lines the north side of the kitchen with a window covering the entire space above it giving the person in the kitchen a wonderful view of the west yard and garden (photo 0018). Although the cabinets have been refaced in a similar slab door design, the cabinet boxes are original and remain in great condition. The terrazzo flooring in the kitchen is a mixture of gold, green, rust, black, and white marble chips in the same size as the marble in the rest of the house. It is still in perfect condition. The kitchen was originally painted yellow with terra cotta colored cabinets. Through the years the colors changed many times including orange and gray and are now stained black similar to an original cabinet in the living room.

Originally the laundry room was a service porch with a servant's toilet, but was enclosed at some point making it more practical for someone to wash and dry clothes in the cold wet winters and hot summers in Mississippi. This did not change the look of the house. The half bath is located near the door to the carport. Ribbon casement windows line the west wall. The original 28 x 16 P-1520F reverse cast iron enamel laundry sink with painted adjustable pedestal remains on the north wall.

From the hall accessible from the den the third section of the original T is reached. This was considered the private wing of the house. Originally the hall accessed three bedrooms and two baths. Two of the bedrooms and the two baths have been updated, but retain their original shape, size and architectural features such as high angled ceilings and large windows which fill the exterior walls and flood the rooms with light (photo 0001). The hall bath still has the original chamois colored tiles which line the entire

room like a wainscot. The master bedroom has a dividing wall made of closets between the bed area and the dressing area (photos 0022 & 0023). The south walls of the bedroom and dressing room were originally painted gray with a bright yellow covering the remaining walls and ceiling.

When the Wiener family grew from two to four children, the architects designed an addition in 1957 accessible from the third bedroom that included two more bedrooms, an additional bath, and a play room. Originally an interior wall was added to the third bedroom creating an awkward hall needed to reach the addition. The wall was removed in 2007 when the bedroom was converted to an office with an exterior door providing access to the back yard. Although this room has changed since the original design, paint colors and the use of the same Formica design found in the bath in the addition unite the space with the rest of the house.

Four stairs lead from the office to the addition which is on a conventional foundation and cantilevered on the east side of the house. The north wall of the playroom is covered in built-in bookshelves. The original paneling covers the remaining walls and conceals the closet doors. An electric drinking fountain was planned and installed in the addition, but no longer remains. A large window on the south wall of the library provides an excellent view of the public wing of the house and its International Style qualities. A door also provides access to the patio from this area of the house.

The two bedrooms in the addition are large with high angled ceilings and walls of plate glass windows. A wall-to-wall Formica counter covers built-in drawers and cabinets in each of these bedrooms (photo 0014). Minimum updates have been made to these bedrooms. In 2009 these rooms and the library were floored with cork which was the original floor covering. Although the bathroom has new ceramic flooring and a new vanity, the original tile walls, bathtub, toilet, and some of the built in cabinets remain.

The original windows remain throughout the house except in the office where an exterior door was added. Crank casement windows that open outward are in each room providing ventilation. Some flutex glass has been added to the bathroom windows in order to keep the wonderful lines of the architecture without visual obstruction of curtains. Shades are now in each room which roll up fully out of sight during the daytime behind the original beams which covered curtain rods. In this way the views of the gardens and trees are unobstructed.

Parts of the exterior of the house were originally "v" joint, tongue and groove vertical wooden siding. There are also large walls clad in brick and entire glass walls. The original siding was replaced with Spruce Green Weldwood PF-L vertical siding in 1966. In 2004 architect Robert Parker Adams was consulted to determine the best plan for the exterior as much of the original siding was rotten and the Weldwood had faded significantly. He suggested re-siding the house in stucco in order to keep the minimal planes of the house. Additionally, Samuel Wiener used stucco to cover exterior walls in some of his mid-century structures and therefore this material and look are appropriate.

CONTINUATION SHEET**

Section: 7 Page: 8 Wiener House at 228 Ridge Drive
Hinds County, Mississippi

From the front of the house one can walk east along the main wall to the patio area. The patio area features two huge live oak trees that are at least as old as the house. Their branches reach out over the entire patio, some of the house, and neighbor's driveway beyond the fence. The patio has most of the original pavers which were discovered after removing a rotted wooden deck in 2005. Some additional pavers were added at this time to fill in the patio area (photos 0026 & 0027). The flat roof extends out over the patio to provide protection from the sun. This was one of the ways the architects adapted the International style to the south. The huge live oaks and other oak trees on the property now shade much of the roof. The shade from the roof and trees combined with the light exterior walls and thick terrazzo floors keep the house cool in the hot Mississippi summers.

From the patio area one can walk along the east side of the addition next to the cantilevered portion of the house (photo 0008). The large plane on this side of the house is unobstructed except for an exterior door to a utility room accessible only with a short ladder. The back yard on the north side of the house is a large fenced area covered primarily by a canopy of oak trees. The ribbon windows characteristic of the International style are a particularly prominent feature and are painted in a darker color on the exterior in order to emphasize their rectangular quality (photo 0010). The west side of the house also features the ribbon windows and an outdoor space for lawn care tools.

The Wiener House at 228 Ridge Drive remains an excellent example of the International Style and one of the few remaining structures by these architects that retains so much of the original architectural integrity.

Section: 8 Page: 9 Wiener House at 228 Ridge Drive
Hinds County, Mississippi

Statement of Significance

Summary paragraph

The Wiener House at 228 Ridge Drive is eligible for listing on the National Register of Historic Places under Criterion C for local architectural significance as a rare and strong example of the International style. The home was designed by Samuel G. and William B. Wiener of Shreveport, LA for Dr. and Mrs. William B. Wiener of Jackson, MS. The modern residence was built in 1951 in the Woodland Hills subdivision. The addition, credited solely to William B. Wiener, was built in 1957.

International Style

The International style of architecture developed in Europe in the 1920s and 1930s. Architects were searching for a new modern approach to design that fit the new mechanized world. They used modern materials such as steel, glass, and concrete. Common characteristics of the style include rectilinear forms, open interior spaces, plane surfaces without ornamentation, and a visual weightless quality. This austere style of architecture contrasted with the stylistically eclectic buildings popular at the time (International Style, 2009). Major figures in the International style include Walter Gropius (Bauhaus in Dessau, Germany 1926), Ludwig Mies van der Rohe (Seagram Building in New York, 1958), Le Corbusier (Villa Savoye in Poissy, France 1929), Richard Neutra (Lovell House in Los Angeles, CA 1928), and Philip Johnson (glass house in New Canaan, CT 1949). In the International style, modern architects, such as these, applied the same stark, functional treatment to a factory, school, or residence (Fricker, 1990). In America these buildings, which often have flat roofs, horizontal windows that sometimes wrap around corners, and unadorned walls, frequently shocked the public (Masson, 2002).

The architects Samuel G. Wiener (1896-1977) and William B. Wiener (1907-1981)

Although the International style was being developed in Europe in the 1920s and 1930s, American architectural schools were generally not acknowledging it. Shreveport architects William and Samuel Wiener became interested in this radical trend and wanted to learn more about it (Masson, 2002). They were interested in an architectural style appropriate to the twentieth century, one that was different from what was being taught and built in America at that time (Kingsley, 2001).

According to William B. Wiener's son (who is also named William B. Wiener and is also an architect), his father attended the University of Michigan where he studied architecture. After graduating, he enrolled at Columbia for post graduate work in architecture, but found that they

National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

Section: 8 Page: 10 Wiener House at 228 Ridge Drive
Hinds County, Mississippi

were still teaching the Beaux Arts method, so he dropped out in 1927 and joined his older brother Sam, Sam's wife Marion, and another Shreveport architect, Ted Flaxman, to travel in Europe for a year to study the contemporary movement in architecture. Samuel Wiener had already received his bachelor's degree in architecture in 1920 from the University of Michigan.

In 1931 Samuel Wiener went to Europe once again. Marion Wiener related to architectural historian Karen Kingsley why the trips to Europe were necessary when she stated, "We had to go. We couldn't see modern architecture here in America and they weren't teaching it in the architecture schools. There was no other way we could find out." (Kingsley, 2001, p. 3). In Europe they visited numerous buildings in the new idiom, attended the 1931 Building Exposition in Berlin, and met various architects, including Erich Mendelsohn and Alvar Aalto. Samuel Wiener studied residential work by Mies van der Rohe and Le Corbusier, among others. He also visited the Bauhaus, which was the most important and influential school of design at the time, where he met Walter Gropius.

Return to Shreveport

After the first trip to Europe, the Wiener brothers returned to Shreveport and started designing buildings in the International style in the 1930s. From 1923 to 1940, Samuel Wiener was a partner in the architectural firm of Jones, Roessle, Olschner and Wiener, where he was responsible for the firm's work in the modern style. In 1940 he set up his own practice where he continued to design "some of America's purest modern buildings" (Kingsley, 2003, p. 337). William Wiener established an architectural firm in Shreveport in 1933, where he worked until his death in 1981. Although the name has changed as the architects in the firm change, the firm still exists in the same space (personal communication, Bill Wiener, June 3, 2009).

When the Wieners began work on their first designs, the style was so new that it was not labeled. It was called the "International Style" in a 1932 book by Henry-Russell Hitchcock and Philip Johnson published in connection with the New York Museum of Modern Art's exhibition on modern architecture. The 1932 exhibition featured photographs and drawings by architects from several countries practicing the new architecture (Samuel Wiener House, 2004).

According to architectural historian Karen Kingsley, who has done much to promote and record the Wieners' legacy, "the Wiener brothers were among the very first in America to design in the new idiom." In 1928 Richard Neutra designed the Lovell House in Los Angeles which is generally regarded as America's first International Style work. Samuel Wiener's earliest design in the International style was in 1931-1932 and William Wiener's in 1933 (Samuel Wiener House, 2004).

In the next few years Samuel Wiener and his younger brother William (independently and together) produced a number of major works in the International Style for Shreveport clients.

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

Section: 8 Page: 11 Wiener House at 228 Ridge Drive
Hinds County, Mississippi

Their work was wide-ranging, including institutional, commercial and residential construction. Features of these designs in the International style included windows with minimal exterior surrounds that were set flush with the wall so that they were seen as a continuation, not an interruption, in the planar surface of the wall. They also frequently included ribbon windows which reinforced the style's decidedly horizontal lines. Some of the windows even turned corners using only clear adhesive at the edge of the glass. Exterior wall surfaces in their designs are typically smooth, uniform, and light colored. Roofs in the structures are most often flat and cantilevered projections are also quite popular (Fricker, 1990). These characteristics made the structures decidedly International while being well suited to the Southern hot and humid climate.

According to Kingsley (Samuel Wiener House, 2004) only about a half dozen International Style buildings designed by the Wieners survive in largely unaltered form. Most of the significant works have been lost or disfigured (Masson, 2002). Samuel Wiener's first work in the style designed in 1931 was the El Karubah Club House overlooking Cross Lake near Shreveport. It is still recognizable in the International Style although it has been extensively remodeled. The Weekend House, also on Cross Lake, was designed by William Wiener in 1933, probably in collaboration with his brother. It was influenced by Le Corbusier's Villa Savoye, which is evident in the pilotis lifting the structure off the ground and providing a space for parking. It was demolished in the 1980s. Samuel Wiener's 1935 design for the Shreveport Municipal Incinerator was his most acclaimed design. It was featured in the *Architectural Forum* in November 1935, at the Paris International Exposition of 1937, in a traveling exhibit by the Museum of Modern Art, and at the Architectural League in New York. In 1974, the City of Shreveport razed the off-white brick building with its signature ribbon windows. The Big Chain Store designed in 1940 was another major Wiener design. It was destroyed by fire in 2003 (The Wiener House, 2004).

The Legacy of Wiener Architecture

Samuel and William Wiener learned from the buildings they studied and by talking with the architects in Europe. They adapted the new forms to work in the heat and humidity of the South with light colored walls that had a cooling effect on the interiors and planar overhangs that kept out the intense summer sun (Kingsley, 2001). They introduced the forms, materials, and aesthetics of modernism to Shreveport a decade before the International style was adopted elsewhere in the state and at the same time it appeared in New York and Los Angeles (Kingsley, 2003). They received praise nationally and internationally during the 1930s. Unfortunately today their contributions are not widely known, even in the scholarly community. "The two brothers were responsible for some of the earliest and most innovative work in America and in the then brand new and rather revolutionary International style" (Fricker, 1990, p. 12). Also, unfortunately, "most of the important buildings by the Wieners have been lost or disfigured, in part because the style was not particularly popular with the public, which never appreciated it as the modern era's first attempt to capture its spirit in architecture" (Masson, 2002, p. 48).

National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

Section: 8 Page: 12 Wiener House at 228 Ridge Drive
Hinds County, Mississippi

According to an article in *Preservation in Print* magazine

Because such important buildings by the Wieners have been lost or remodeled, those that remain intact are all the more important. It is not mere theatrics to suggest that if this trend is not reversed, there will soon be a day when their work can only be appreciated in photographs and drawings...The problem with trying to preserve the International Style is that most people do not like it, particularly as a residence. Le Corbusier's definition of a house as 'a machine for living' just does not fit the American ideal of a cozy home. Nor are International Style buildings regarded as very historic by the general public.... Whether one likes the style or not, it represents a very significant epoch in the history of architecture—a generation of architects who were attempting to capture the spirit of the modern age. In the vanguard of the movement were the immensely talented William and Samuel Wiener, whose designs should be counted among the greatest works of American Twentieth century architecture. (Fricker, 1990, p. 13)

Some recognition is now being given to the Wiener designs. In 1991 two designs by Samuel G. Wiener were listed on the National Register of Historic Places: the Wile house and the Shreveport Municipal Memorial Auditorium. During the same year one of William B. Wiener's designs, the Flesch house, was also added (William Wiener, 2009). In 2004 two additional Samuel Wiener designs were added to the Register: Bossier City High School (Samuel Wiener, 2009) and the Samuel Wiener House, his own home in Shreveport, Louisiana (National Register of Historic Places, 2009).

The "T" Design

Although the blue prints list Samuel and William Wiener as the architects for the residence at 228 Ridge Drive in Jackson, MS, the homeowners give credit to William for the design as does the architect's son. According to William's son, William B. Wiener Jr., who is also an architect and who worked in his father's office for many years before going out on his own, the greatest contribution that William B. Wiener Sr. made to architecture was the development of a style: a modular house that was "T" shaped. The Wiener House at 228 Ridge Drive is part of a conceptual series William developed. This concept approached the traditional two story house but took the second story off and placed it next to the first story. The carport and storage areas were the stem of the "T" with the public areas forming one arm and the private sleeping quarters being the other. This design recognized the importance of the family automobile and was refined through a series of houses including the Wiener House on Ridge Drive.

This concept also used a module system and was generally based upon standard windows. The first house where William employed the modular T-plan was the Gamm house at #1 Longleaf Lane in Shreveport, LA. It was developed on a 5 or 6 foot module utilizing the "T" plan. This

two bedroom house is currently owned by Kim Mitchel, architect and Senior partner in the firm started by William B. Wiener, Sr. Following that house William designed a house for a doctor on Querbes Drive in Shreveport which was a predecessor to the house at 228 Ridge Drive in Jackson. According to William B. Wiener Jr., "the house on Querbes has been remodeled about 5 times and would not be Register eligible. There is a another house on Querbes Drive designed for Dr. Davisson which was a larger house. I believe it is pretty much intact; a "T" plan presently owned by Charlton Lyons." William B. Wiener Sr.'s own house at #2 Longleaf Lane was built in 1951 and is currently owned by his son who believes it is on a 8 foot module. He has remodeled the house with sensitivity to the architectural integrity. Commenting on the "T" design he added, "The way we do things has changed. These houses had separate kitchens. There was someone in the kitchen cooking. Today the kitchen is open."

There is another residence in Jackson on Redbud Street designed by the Wieners for Dr. Julian Wiener and his wife Katherine. These doctors and architects had more than a business relationship. According to Jay Wiener, who grew up in the Wiener home on Redbud, the fathers of the architects and doctors were brothers and the mothers of the architects and doctors were sisters making the architects and doctors double first cousins.

Woodland Hills

The Wiener House at 228 Ridge Drive is located in the Woodland Hills subdivision in Jackson, Mississippi. The homes in the Woodland Hills area feature diverse styles of architecture including Colonial Revival, Tudor Revival, Neoclassical, Neo-Mediterranean, and a few Modern styles, including a Frank Lloyd Wright design, Fountainhead (NR, 1980). The International style of architecture for residences was not popular in Mississippi in the twentieth century and, therefore, few examples of the style were built. The style is still not generally appreciated in Jackson as evidenced by the number of comments the homeowners have received since living in the house including, "You *live* here?" "Is that your *house*?" and "I thought that was a carport."

Since moving to the state the homeowners have witnessed four of the very limited number of mid-century modern residences in Jackson leveled to make room for more popular styles. There are a few International style homes remaining in Jackson. One of the prominent homes at 132 Ridge Drive was built as a personal residence by one of the associated architects for the Wiener house at 228 Ridge Drive. The current homeowners modified the home to create a more open space in the living area and allow for wheelchair accessibility on the main floor. Although the extensive remodeling included moving some walls, the home is a wonderful example of an International style, though no longer the original design. Another International style home in Jackson is at 3911 Eastover Drive. The home is currently being renovated to add a second story in a similar style. Although it appears as though the construction will be sensitive to the design, it is an extensive modification from the architect's original one.

The Wiener House at 228 Ridge Drive

The Wiener House at 228 Ridge Drive was built in 1951, the same year Dr. William and Carolyn Wiener had their second child. The home was enlarged in 1957, the year their fourth child was born. Although the blueprints for the original design in 1951 are credited to both Samuel and William Wiener, the addition is credited solely to William Wiener. The unadorned, light colored walls and planar roof lifted on steel posts make the house a clear example of the International style even from the street. The modular design with its open interior plan, modern materials, ribbon windows, and cantilevered addition make the Wiener house at 228 Ridge Drive an exceptional example of the style.

The house had to be somewhat unusual for the time because it was published in Jackson's newspaper during construction in 1951 (Figure 1). It featured a rendering of the house and called the house "one of Jackson's most modern residences." They listed the Shreveport architects, associated architects, and general construction contractor. The paragraph further noted that the home would "contain approximately 3600 sq. ft. of floor area including three bedrooms, two baths, living-dining room, game room, breakfast room, kitchen, service and equipment room and two-car port." They went on to list the construction materials and interior finishes (Clarion Ledger, 1951).

Dr. William and Carolyn Wiener lived in the house until their deaths in 2001 and 1998 respectively. Except for the addition in 1957 very few modifications were made to the house during their ownership. In 2002 the heirs sold the home to the current homeowners, Craig and Stephanie Busbea, who vow to maintain the original architectural integrity and who also plan to live in the home for 50 years.

Conclusion

The Wiener House at 228 Ridge Drive is significant under Criterion C for architecture because it is a masterfully designed example of an International style residence by two of the first generation of modern masters, William B. and Samuel G. Wiener. The home has only had two owners and very few modifications, none of which affected the International style qualities essential to its historical integrity.

ONE OF JACKSON'S most modern residences is now under construction on Ridge Drive in Woodland Hills for Dr. William B. Wiener. Samuel G. Wiener and William B. Wiener, Shreveport architects, and Trolie & Liddle of Jackson are the associated architects. Charles Schelb is the general construction contractor. The residence will contain approximately 3600 sq. ft. of floor area including three bedrooms, two baths, living-dining room, game room, breakfast room, kitchen, service and equipment room and two-car port. The construction is of frame and masonry walls with concrete pile foundation and built-up roof. The interior finish will be terrazzo floors, plasterboard and plywood walls and ceilings.

Figure 1. A rendering of the Wiener house at 228 Ridge Drive published in the Clarion-Ledger, February 4, 1951.
